PROFILE

Final-year B.Tech Computer Science (AI & ML) student focused on building AI-powered backend applications and intelligent data systems using Python. Interested in backend engineering, applied AI, and production-grade software. Currently building SupplyGuard, an AI-powered supplier intelligence platform, while strengthening data structures, system design fundamentals, and backend engineering.

PROJECTS

SupplyGuard — AI-Powered Supplier Intelligence Platform

- Built an AI-assisted supplier intelligence platform to analyze supplier performance and support procurement decision-making using Python and Streamlit.
- Designed a rule-based supplier health scoring engine using delivery, quality, payment, and communication metrics to identify high-risk suppliers.
- Developed an interactive dashboard for supplier analytics, risk visualization, and operational insights using Pandas and Plotly.
- Integrated an LLM API to generate supplier communication drafts and business recommendations from structured supplier data.
- Implemented a CSV-based supplier data ingestion and preprocessing pipeline for analytics and risk evaluation.
- Selected as a Top 10 Finalist (out of 600+ registrations) at the Innovatez GenZ Hackathon 2026, organized by Zentiti, for presenting the SupplyGuard MVP.**

Bone Fracture Classification Engine — Computer Vision

- Built a CNN-based deep learning model for multi-class bone fracture classification using X-ray images.
- Developed a preprocessing and dataset loading pipeline using PyTorch.
- Achieved **95.9%** validation accuracy on a 10-class fracture dataset.

Classical Edge Detection & Segmentation Analyzer — Image Processing

- Implemented classical computer vision techniques including Canny, Sobel, Thresholding, and K-Means clustering for image segmentation.
- Benchmarked algorithms on the BSDS500 dataset using Python and NumPy.
- Compared segmentation quality through automated evaluation visualizations.

EDUCATION

Bachelor of Technology in CSE (AI & ML)

2023 - 2027

Vellore Institute of Technology (VIT), Bhopal | CGPA: 8.44

PROFESSIONAL SKILLS

- Languages:** Python, SQL, C++ (Basics)
- AI & Machine Learning:** PyTorch, TensorFlow, Scikit-Learn, CNNs, NumPy, Prompt Engineering (Basic), LLM API Integration
- Backend & Frameworks:** Streamlit, Pandas, Plotly
- Development Tools:** Git, GitHub, VS Code

ADDITIONAL INFORMATION

- Awards/Activities:** Top 10 Finalist (out of 600+ registrations), Innovatez GenZ Hackathon 2026, organized by Zentiti — developed and pitched the SupplyGuard MVP.
- Languages:** English, Hindi, French (Basics).
