## PROJECTS

### Bone Fracture Classification Using Chest X-RAYS

*Deep learning model for classifying bone fracture types using X-ray images with high accuracy.*

- This project implements a deep learning framework for classifying bone fractures from chest X-ray images using PyTorch and MONAI transforms.
- Automated dataset preprocessing dynamically detects fracture types, mapping them to numeric labels for efficient training and testing of neural networks.
- The codebase leverages torch.utils.data for custom dataset handling, ensuring robust image loading and transformation for accurate fracture classification.
